## GENERAL INFORMATION

### **1.1 SYSTEM OVERVIEW**

The name of the mini project which I have made is Library Management System (LMS). This project can be used on the low level. The main purpose of the software is to manage the catalog of a library. This software helps to keep the records of the whole transaction of the books available in the library. This software, which I have made, is very easy to use and fulfills all the requirements of the librarian. It contains features that help librarians to keep the records of the books available as well as issued books.

### **1.2 SYSTEM CONFIGURATION**

Library Management System operates on personal/Desktop Computers. This application does not require Internet/WiFi connection. Library Management System can be used without any further configuration.

### **1.3 USER ACCESS LEVELS**

Everyone can use the application, but only registered users are able to access the system, because it requires a password to access.

---

## 1.4 Features of Library Management System

- Keep records of different categories of the books; Mechanical, Civil, software etc.
- Classify the books subject wise.
- It provides an easy way to enter new books
- It helps to keep record of complete information of book like; Book name, Authors name; Date of issue etc.
- Provides an easy way to check in through the password.
- It provides an easy way to know status of books
- It provides an easy way to search the books
- No need to invest heavily on hardware
- Can calculate the number of books
- And much more.....
